U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No.

Page 2

Serial Number: 09/752,998

Art Unit: 2829

Claims 1-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for 1.

failing to particularly point out and distinctly claim the subject matter which applicant regards as

the invention.

It is not clear what is meant by "first side" and "back side" of a printed circuit board.

Some boards have components mounted on both sides. It is not clear how front and back sides

would be determined for boards with components mounted on both sides. The examiner has seen

boards with sockets on both sides where the sockets are intended to accept DIP components.

Front side and back side seems to be meaningless for such boards.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the 2.

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or 3.

on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-25 are rejected under 35 U.S.C. 102(b) as being fully anticipated by any one of 4.

Kilby et al, Bentler, Sato et al, Cooke or any commercially available double sided board with or

without sockets for accepting components. Anything that is operated is tested for proper

operation. Every time one turns on a light the bulb is tested. The normal operation of a double

sided board will inherently test whatever components are on the double side board.
